### **Open House 2021 (A Mini Project Competition)**

Open House 2021 (A Mini Project Competition) was conducted by the Falcon Team of Electronics and Communications Department of RNSIT on November 13, 2021.

Around 80 teams across all branches of engineering participated in fields including Teaching Aids, Mini Projects, Hardware, and Software projects. The projects in the teaching aids category were aimed at making a model to teach any Electrical or Electronics concept easily.

The Software projects ranged from making websites to apps to tackle a particular problem. The Hybrid projects involved the use of both software as well as hardware to build real life prototypes and working models. The participants discussed their projects with the spectators. They were given different situations and had to come up with spontaneous solutions.

The event was conducted in the ECE department and the projects were judged by our alumni. The event was graced by HOD's of different departments and our Principal Dr. M.K. Venkatesha during the award ceremony.

This event showcased the brilliancy of the students of RNSIT. The participants were enthusiastic and were eager to learn the various ideas which contrived during the Open House.
